DETAILED ACTION

1. Applicant's amendments filed on 7/21/2005 has been received and entered in the case.
2. Applicant's amendments and remarks with respect to the claims have been fully considered and are persuasive.

Allowable Subject Matter

3. Claims 1-9 and 11-17 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Claims 1 and 8: In view of the limitations, the prior art does not disclose alone or in combination a motor control apparatus with all the necessary components for rotating a rotor of a motor to a target position, wherein a reversing detector is used to detect the reversing of a rotation direction of the rotor occurring on its way to the target position; and a current supply phase holder for fixing the current supply phase for which current supply is effected by a current supply controller to a preceding current supply phase when the reversing detector has detected reversing. In addition the limitations of claim 8, suggest that the controller sets from a predetermined switching order of the current supply phases, a phase to which switching should be made for the disconnection-detected phase if the disconnection detector has detected a disconnection in a winding of one pulse when a feedback control starts.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing
